About Us

The National Institute for Bioprocessing Research and Training (NIBRT) is a global centre of excellence for training and research in bioprocessing.

Our world leading NIBRT principal investigators and scientific advisors including Dr Jonathan Bones and Prof Pauline Rudd continue to drive advancements in the field of bioprocessing analytics through pioneering and innovative research.

Our highly regarded scientists are situated in the award winning NIBRT facility with access to state-of-the-art laboratory equipped with top-of-the-line instrumentation.
About NIBRT
Contract Research

➢ We provide detailed characterisation of biologics in line with ICH Q6B and Q5E.

➢ For over 10 years NIBRT Contract Research has worked with Top 20 global Biopharma companies as well as SME’s, virtual companies and law firms.

NIBRT Mission

Our mission is to provide you with a partner to outsource analytical services. We provide invaluable information on your biologics, assisting you in key decision making during candidate development and process change.

We support you in bringing high-quality, safe and efficacious drugs to market.

“NIBRT came highly recommended from a contact in New York and we were not disappointed: Patrick Jennings and his team did a fantastic job for us on a very short turnaround. Within a couple of weeks they had optimised several testing processes for measuring the purity of an antibody for the purposes of litigation and provided helpful results that were strategically important to the case. No amount of effort was too much and Patrick and Caitriona provided daily updates, slide decks and telephone calls to keep the team apprised as to progress, Patrick even going so far as taking delivery of an HPLC column at his home address on a Saturday so that a valuable day’s testing could be saved. We would recommend them universally and thoroughly enjoyed the experience of working with them. Ten out of ten for service, quality and professionalism.”

Partner at a top-tier patent litigation boutique law firm in London
Contract Research Services

- Structural characterisation, measurement of physiochemical properties and determination of process and product related impurities to satisfy ICH Q6B requirements.

Bespoke Analytical Development

- Feasibility/pre-validation, verification and qualification
- Troubleshooting of existing client methods
- Replication of methods for IP litigation

We came across NIBRT Contract Research through our work with a leading expert in the Biotherapeutic characterisation field. From first contact, NIBRT Contract Research has been an outstanding facility to work with. The team at NIBRT Contract Research has been instrumental in pushing the boundaries of our testing needs. They are not only flexible, responsive and a pleasure to work with, they also go several steps further to help us problem solve and develop new ways to test our products and learn more about our systems. NIBRT Contract Research is a top class analytical facility and we will continue to work with them and recommend them to our colleagues going forward. We would use no one else.

North American Law firm specialising in intellectual property
“For over 10 years NIBRT Contract Research has worked with Top 20 global Biopharma companies as well as SMEs, virtual companies and law firms”.

Why NIBRT?

- We are a team of characterisation specialists with expertise in the characterisation of biological products such as monoclonal antibodies, fusion proteins, erythropoietin, interferon, enzymes and many more.

- We provide tailored detailed reports to ensure full clarity of data and results.

- Creation of bespoke projects, flexibility in scheduling, quick response times.

- Each service is overseen by a subject matter expert project manager and dedicated highly trained analyst(s) who offer support throughout the project lifetime.

NIBRT Contract Research has enabled Levicept to access a wide range of analytical services delivered through the provision of top specification analytical instrumentation. In addition to providing protein and glycan analytical services their ability to develop new methods to meet our specific needs enables us to quickly resolve our analytical queries in timely and cost effective manner. Working with NIBRT Contract Research has enabled us to gain a greater understanding of our clinical candidate.
